## (54) PICTURE PROCESSING UNIT

### (57)Abstract:

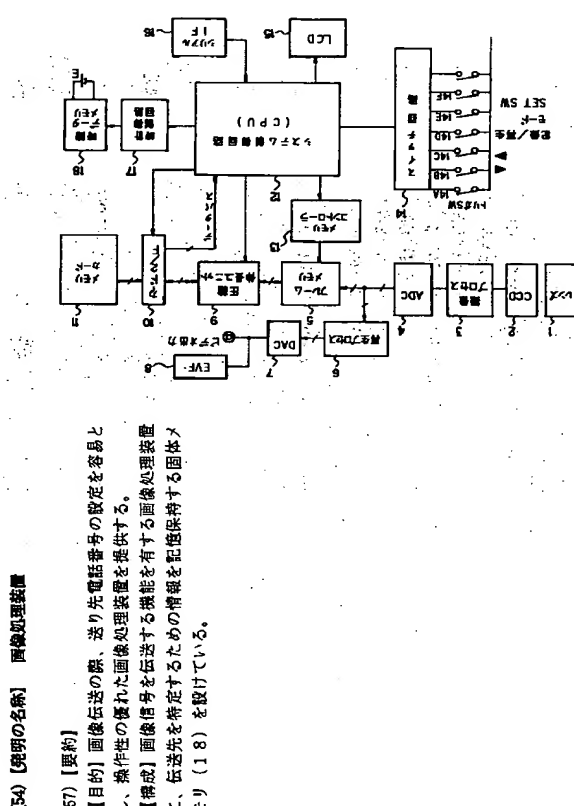

**PURPOSE:** To facilitate the setting of a destination telephone number and to obtain the equipment with excellent operability in the case of picture transmission by providing a solid-state memory storing information to specify a transmission destination in the equipment.

**CONSTITUTION:** A switch circuit 14 receives an operating state of various switches commanding the operation of a camera and sends it to a system control circuit 12. When a mode switch 14E is operated, the mode is transited in the order of the usual mode, the transmission mode and the telephone number setting mode for each operation. In the telephone number setting mode, when positive/negative feed switches 14B, 14C are operated according to the display of an electronic view finder EVF 8 and a liquid crystal display device LCD 15 by the operation of the set switch 14F, the telephone number and the priority are stored in a time data memory 18 comprising an EPROM. Then the transfer mode is set, and a desired telephone number is set by the switch 14F and sent. Thus, a destination telephone number is easily set.
